What we do with your artwork...

1. We will scan in the drawing you made, to get the image into the laser system. We will produce exactly what you send on the order form, so be sure the quality is as good as you can make it. One reason we have you create the design at double the size of the final stamp is that the quality of the image will improve as we shrink it down to size.

2 inch circle & artwork you send

2. We will make a mirror image of your design and use a laser to cut the image into the stamp tool. The reason we make the tool as a reverse image of what you draw is that the final mark in clay will then read correctly.

3. We ensure the quality of the final stamp tool to be sure your image matches the original artwork you send to us. Most stamps ship to you in 10 days or less after we receive the order, depending on the production schedule.

You can request a proof by e-mail free, for your approval before we make your stamp. If you are not happy with the final stamp, return it and we will make a free replacement from a modified design, so you get a 2nd chance - at no additional cost.
